

M. Mauro Brunetti* (*) & Massimo Cresti. *Aclis talaverai* n. nov. per *Aclis scalaris* (Garcia-Talavera, 1975). Boll. Malacol., 54: 195-197 (2, 30/11/2018)

Riassunto

Viene segnalato il rinvenimento in sedimenti del Pliocene toscano, di alcuni esemplari riferibili ad *Aclis scalaris* (Garcia-Talavera, 1975), la specie viene illustrata e discussa. Il nome *scalaris* non è utilizzabile in quanto presente una *Aclis scalaris* Seguenza G., 1876. Il taxon viene emendato come *Aclis talaverai* n. nov.

Parole chiave

Eulimidae, Pliocene, Italia, sistematica.

Abstract

During the study of the large Piacenzian fossil sample from Orciano Pisano (Pisa, central Italy) few samples have been found which correspond to *Aclis scalaris* (Garcia-Talavera, 1975). This is the first finding for this taxon as a fossil. Issues have been encountered after our naming due to the previously reported *Aclis scalaris* Seguenza G., 1876, from the Pliocene of Altavilla Milicia (Palermo, southern Italy). Nevertheless, such taxon exhibits spirally carved shell so that we can exclude it could be *Aclis scalaris* (Garcia-Talavera, 1975) as this characterized by a flat one. The name *Aclis scalaris* (Garcia-Talavera, 1975) cannot therefore be used and it is amended as *Aclis talaverai* n. nov.
